EDUCATION

University of Oklahoma

BS in Computer Science – 4.00 GPA

Norman, OK

Expected Graduation December 2026

EXPERIENCE

Upcoming Microsoft Software Engineering Intern

May 2026 – August 2026

Microsoft

Seattle, WA

- Working with Microsoft’s Commerce and Ecosystems team as a Software Engineer Intern this upcoming summer

Google Software Engineering Intern

May 2025 – Aug 2025

Google

Pittsburgh, PA

- Spearheaded the integration of the AI Overview feature with Google Gemini into the Programmable Search Engine product through **AI Prompt Scheming** with the **Gemini API** to provide valuable insights into user queries.
- Engineered the end-to-end feature pipeline—from backend data processing to front-end delivery—leveraging **JavaScript**, **experiment flag architecture**, and internal tooling across a large-scale, production-grade codebase.
- Collaborated cross-functionally with a UX designer, partner intern, and two senior engineers to conceptualize and implement an intuitive **UI/UX** experience for AI-augmented search, emphasizing performance and scalability.

Momentum Technologies Software Development Intern

May 2024 - Aug 2024

Momentum Technologies

Remote

- Contributed to a 5-person intern team to effectively update **Vue.js** web components to utilize Vue 3 instead of Vue 2.
- Gained practical experience navigating an industrial-sized codebase, operating within an agile development environment, and adhering to best practices for writing clean, maintainable code.

William Kerber Scholar Teaching Assistant

Aug 2025 - Present

University of Oklahoma

Norman, OK

- Aided students in comprehending computer science course concepts effectively by breaking complex **object-oriented programming**, **algorithmic**, and **data structure concepts** down into understandable lessons for lower-level classes.
- Provided individualized support for coding projects and assignments by diagramming systems, reviewing code, and communicating effectively to understand student’s struggle points.

Project Manager / Developer

Oct 2025 - Present

Revo (Startup)

Norman, OK

- Co-founding a furniture resale startup, serving as Project Manager and Developer—authoring the PRD, defining and prioritizing user stories, planning technical implementation, and contributing to full-stack development to drive the product from concept toward MVP

PROJECTS

Pantry Pilot Pro | Git, Maven, Java

May 2025

- Developed “Pantry Pilot,” a Java web application utilizing **Maven** to generate personalized grocery lists and recipe recommendations based on user preferences and on-hand ingredients.
- Utilized **React Native** and **Expo** to develop and test the mobile UI and application workflow

2D Data Classifier Neural Network | ML, Pytorch, Pandas

Jan 2025

- Built an end-to-end **ML** pipeline in **Python (PyTorch + scikit-learn)** to train and evaluate a backpropagation neural network for multiple two-class classification problems using provided synthetic CSV datasets (including a more complex “moons” dataset)
- Implemented core model + training infrastructure (ANN architecture, custom train/validation/test loops, and data splitting) and automated experiments via bash scripts to sweep key hyperparameters (e.g., learning rates 0.001/0.01 and 50/100/150 epochs) across datasets.
- Delivered reproducible results and analysis artifacts by standardizing dataset formatting, packaging dependencies in a Conda environment, and exporting evaluation outputs (CSV + plots) to support model comparison and performance reporting.

Skillsprout | Supabase, Next.js, Typescript, React

Jan 2025

- Built and deployed a full-stack AI learning platform (Next.js, TypeScript, React) using the **Claude API** with forced tool use to generate structured skill trees from natural language prompts, backed by a **Supabase/PostgreSQL** schema.

TECHNICAL SKILLS

Languages: Python, Javascript, TypeScript, Java, C++, C, R, Assembly, Lisp, HTML, CSS

Technologies: Git, Github, Docker, Jira, Jest, RavenDB, AWS, PostgreSQL, Azure Database, Ros2, ReactJS, React-Native, Expo Go, Critique, Buganizer, LLM APIs
